

Silver Cove Colloidal Spa Sanitiser *Enjoy a truly healthy spa for peace of mind and body*

Replace harsh, toxic chemicals with the health and skin-enhancing virtues of Colloidal Silver. Based on a unique formula of colloidal minerals and oxygen to deal with all pathogens and algae, *Silver Cove* is *Salud Health Products'* simple and elegant solution for a pristine, crystalline spa without compromising your body or the health of your family and friends.

Silver Cove lets you luxuriate with peace of mind in a pool that serves the purposes you originally intended – relaxation, health and well-being.

Frequently Asked Questions (FAQ)

Can *Silver Cove* be used in my spa pool?

Silver Cove can be used in any model of spa pool.

How environmentally friendly is *Silver Cove*?

Silver Cove is environmentally safe and natural, eliminating the need for Chlorine and Bromine

Will *Silver Cove* be irritating to sensitive skin?

Colloidal Silver is widely acknowledged for its therapeutic effect on many skin problems - enhancing and normalising, rather than irritating, the condition of your skin (and respiratory membranes).

Does *Silver Cove* have an odour?

Silver Cove is odourless and tasteless.

How much *Silver Cove* is needed for my spa pool? How often do I need to add more sanitiser?

2 litres of *Salud's Silver Cove* formula will be added for every 1000 litres of pool water in the first three days:

As water quality varies from place to place we recommend an initial three-day protocol to remove contaminants from your water before using your spa:

On Day 1 Drain, clean and refill spa pool. Add 1L *Silver Cove* to your spa, followed by 500 ml on **Day 2** and 500 ml again on **Day 3** while running the pool for a minimum of 6 hours per day) and cleaning the filters each day. The spa pool water should be clear and odourless. (In rare cases, it may be necessary to add further 100 ml increments).

The filter needs to be hosed off and left to soak in filter sanitiser /degreaser overnight on each of the 3 days.(Poolwise makes a natural, plant-based filter degreaser). Drying off in the sun is also very beneficial.

Once a week thereafter, add **½ litre (500 ml)** per 1000 litres of pool water to be sanitized.

Will using *Silver Cove* in my spa pool require a good deal of pool maintenance?

A great advantage of *Silver Cove* is the easy, low maintenance usage. PH of your water does not affect the efficacy of the product.

Do I need to keep my spa pool at a certain temperature in order for *Silver Cove* to work?

No. *Silver Cove* is not temperature sensitive so this is not a concern; however, do keep your spa pool covered when not in use.

Does my pump need to be operating in order for *Silver Cove* to be effective?

Silver Cove will save you money and energy as it does not require continual pump usage to keep water circulating. At least an hour a day is advisable and during and after using your spa pool. The filter pump should also be running for 20 minutes or so after adding *Silver Cove*.

What do I need to do in order to get optimal results when using this type of product?

Because Silver Cove and similar, natural products do not contain harsh chemical disinfectants, a more precautionary approach to controlling pool usage is advised.

Common sense guidelines to maintaining healthy, high level water quality involve:

- having all pool users shower before using pool
- making sure sunscreens, tanning lotions etc do not contaminate pool water
- keeping pool covered when not in use
- circulating water for a short period every day or two if possible

A clean filter is really important. Clean at least once a week (depending on frequency of pool use) If the filter is clean, the water should be clean.

How to clean your filter:

It is recommended that filters are washed using a garden hose working from the top down. Using a filter wand will take less time, do a better job and the chance of damaging the filters is reduced. Do not use a high pressure hose, pressure washer or stiff brush. Soak the cartridge for at least an hour (overnight is preferable) in an approved filter cleaner solution.

It is advisable to **rotate two filters** which will prolong the life of your spa filter considerably. One filter can soak in filter cleaner while the other filter is in service.

Micron spa filters are preferable. Micron filters are either used alone or in conjunction with pleated filters. Micron filters use a different "spun" style of filter media and typically are good to 5 microns so they are ideal for clarifying water.

How important is changing the spa pool water?

Depending on level and type of usage, (as with any type of sanitizer) periodic draining, cleaning and reinitiating the product's protocol is recommended to ensure consistent spa water quality.

What if the spa water becomes less clear?

At any sign of decreased water clarity/quality or when spa is under heavy usage or has long exposure to direct sunlight, increase weekly treatment amount by 100 ml increments until clear. Make sure that the filter has been cleaned/degreased.

Oxygen Shock (from SpaWise) is compatible with this product and may be used occasionally if desired.

Are there any other advantages to using Silver Cove in my spa pool?

The use of *Silver Cove* is entirely flexible and adjustable (using less or more product) according to conditions, level and manner of spa pool usage. Silver Cove can be purchased periodically as required to suit your budget.
